

Commercial News – On Today's Europe and even on Stieglitz or Keynes – what is Europe and economics

By Shomit Sirohi

This then is science – the humour is how it doesn't work very well for Europe which does the opposite of what is called a cultural logic – it just means the news is better at getting the real actual process of a cost of living crisis – in other parts of the world – it is just numbers and numbers which can seem like lower numbers in Latin America and the Arab world – Israel is high on numbers.

I. A Run Through of History – See the Picture in History

In fact the history of commerce and economics, even finance then is a long history of Europe and then America which is via British colonialism the process of capitalist accumulation which is also though the formation of cities and even towns and countrysides and finally even forms of architectural development and even finally economic crisis in the whole period from the 20th century to recently which is crisis ridden and so crisis ridden that Marx calls it a perennial crisis – that is capitalism, it is always in crisis.

II. Recent Arcs – Is it Crisis changed to A Period of Cost of Living Crisis or is it a Renaultism which is working and so Ernest Mandel on the history of capitalism and recent arcs – but in

sophisticated dialectics it is of course just a cost of living crisis

Mandel announces the process of in fact history as vast sketches of what is called global capitalism and its modalities of liberalism first and then neo-liberalism recently which is bound to the process of automobile manufacturing as in fact Fordism which is called Keynesianism and the newer crisis in post-Fordism till there is Renaultism which seems like a Fordism and is about mass protests and living crises in Europe – how Mandel argues is therefore to shift to a cultural logic as well called postmodernism.

III. Keynes or Stieglitz – the debate is not Marxist for actual processes – it sounds to institutional for it to be a real debate – in fact it is Keynes mixed with Renaultism which though appears as Stieglitz and can be called that – if you were genius – but is in fact a really advanced idea of what is actually happening as Renaultism according to Mandel – what is called a Keynes-Stieglitz mix of things

In fact then it is only institutional debate that calls it Steiglitz – it is actually a process called in fact Renaultism which is how in fact the living there is cheap, and Fordist type mass protest which includes unionizing and is also high and elite but actually cultural as a elitist social lifestyle – which in Europe is actively a cost-of living crisis instead.
